MEMORANDUM TO THE EXECUTIVE DIRECTORS
INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

Request for Inspection

India: Vishnugad Pipalkoti Hydro Electric Project (VPHEP) (P096124)
(Second Request for Inspection)

Summary

1. In accordance with paragraph 18 of the Resolution\(^1\) of the Inspection Panel (the “Panel”), I hereby inform you that on March 1, 2022, the Panel received a Request for Inspection (the “Request”) of the Vishnugad Pipalkoti Hydro Electric Project (P096124) (VPHEP or the “Project”). This is the second Request relating to the Project. The Panel had previously investigated the Project in response to the first Request for Inspection in 2014.

2. The Request was submitted by 34 community members (the “Requesters”) living in Chamoli District, Uttarakhand. The Requesters authorized three individuals to represent them and asked the Panel to keep their identities confidential. On April 17, 2022, the Panel received additional signatures supporting the Request, bringing the total number of Requesters to 115 community members. The Requesters raise concerns about resettlement and rehabilitation of livelihoods, the loss of a sense of community, destruction of physical cultural heritage, loss of traditional cultural knowledge and religious identity, adverse impact on the ancient Lakshmi Narayan Temple from muck dumping, relevant environmental clearances, and intimidation and reprisals.

3. The Panel had received an earlier Request for Inspection of VPHEP in July 2012 from residents of the Chamoli District, Uttarakhand. The Panel had then conducted an investigation of the Project and submitted its Investigation Report\(^2\) to the Board of Executive Directors (the “Board”) on July 1, 2014 (the “2014 investigation” or the “investigation”). On

---

September 30, 2014, the Board approved the action plan included in the Management Report and Recommendation\(^3\) submitted in response to the Panel’s Investigation Report.

4. After conducting its due diligence on the current Request, the Panel notes that the concerns raised in this Request relate to issues already investigated in 2014 when the Panel received the previous Request. Therefore, they cannot be considered as new evidence not known at the time of the prior Request, as required under the Inspection Panel Resolution. On this basis, the Panel is not registering this Request.

The Project

5. VPHEP was approved on June 30, 2011, for a total project cost of USD 922 million. The International Bank for Reconstruction and Development (the “Bank”) is financing USD 648 million of the total project cost and the Borrower, THDC India Limited ("THDC"), which is also the implementing agency, is providing USD 274 million. After two cancellations of USD 100 million each from the original amount, the current Bank financing amount is USD 448 million. The current closing date of the Project is June 30, 2022. It is a Category A Project, and the following safeguard policies are triggered: Environmental Assessment (OP 4.01); Natural Habitats (OP 4.04); Physical Cultural Resources (OP 4.11); Involuntary Resettlement (OP 4.12); Forests (OP 4.36); Safety of Dams (OP 4.37); and Projects on International Waterways (OP 7.5). The Project financing was 35.21 percent disbursed at the time of the receipt of the Request.

6. The Project development objectives are to “(a) increase the supply of electricity to India’s national grid through the addition of renewable, low-carbon energy; and (b) strengthen the institutional capacity of the Borrower with respect to the preparation and implementation of economically, environmentally and socially sustainable hydropower projects.”\(^4\) The Project has two components. The first component is the construction of the 444-megawatt project in Chamoli district, Uttarakhand, India. The second component is providing support to capacity building and institutional strengthening at THDC. The issues raised in the Request relate to the first component of the Project.

The Request

7. The Panel received this Request for Inspection on March 1, 2022, from 34 community members claiming serious harm as a result of the Project. On April 17, 2022, the Panel received additional signatures supporting the Request, bringing the total number of Requesters to 115 community members. The Requesters asked for confidentiality and authorized three

---

individuals to represent them. The Requesters live in Project-affected areas in Chamoli District, Uttarakhand. The alleged actual and potential harms raised in the Request are detailed below.

8. **Resettlement and Livelihood Rehabilitation.** The Requesters allege a lack of attempts to search for “alternate alignments or design modifications.” They claim that at the time of the agreement over resettlement there was a lack of meaningful consultation and disclosure of Project-related information in the language they understand. The Requesters further allege the acquisition and rehabilitation agreement was “fraudulent,” and it was signed by only nine villagers and the then-village headman, who were not representative of the community. They state their land has been acquired as a muck dump zone, and allege that villagers were handed a monetary package with inadequate valuation and compensation amounts for the resettlement. They claim they suffered the loss of fruit-bearing trees guava, mango, litchi, jackfruit, lemon, citrus, etc. which were a permanent source of high income for generations. They also claim that they have been cut off from their grazing lands and forest, cattle rearing, fuel collecting and grass cutting. They claim these tasks have become more labor intensive and difficult. They added that women now are suffering from physical overwork. They state that their overall quality of life has declined immensely because of “loss of a communal and social participation”.

9. The Requesters state they were “left to fend for themselves and relocate themselves on their own.” Thus, according to them, approximately 124 families scattered to nearby areas. The Requesters claim this has resulted in an irreversible loss of community, heritage, traditional knowledge and close-knit social well-being. The Requesters also claim that the scheduled tribe that does not own land but used to work on the rest of the community’s land has lost their single opportunity for employment due to the scattered relocation of the villagers.

10. The Requesters allege that on September 22, 2021, THDC forcefully entered some of the villagers’ houses with the assistance of more than 200 policemen, threw out their belongings and demolished their houses. The Requesters claim some villagers, including a widow, were locked up in a police station as a result of protesting against this incident. The Requesters state they had received several notices to vacate their houses but “no one was especially concerned since such notices were a routine affair since the last years.” The Requesters claim the Project work only commenced in 2014 “in a sporadic and haphazard manner” even though the resettlement agreement was made in 2009, and that the September 2021 forced eviction was unwarranted.

11. **Infrastructure and Safety Conditions.** The Requesters are concerned with the water supply, the lack of infrastructure and the safety conditions at the resettlement locations. They allege their lives and livelihoods have degenerated due to resettlement, which has particularly aggravated and worsened conditions for women.

12. **Physical Cultural Resources.** The Requesters allege the destruction of physical and cultural heritage, and the loss of their cultural and traditional knowledge and religious identity. According to the Requesters, their village was built around the Lakshmi Narayan Temple (the “Temple”), which was constructed between the eighth and ninth centuries. They state the Temple was an alternative place of worship for pilgrims who could not reach Badrinath, thus making it an important heritage site. They state that there are groups of temples involving other
deities around the Temple. According to the Requesters, the ancient Temple and the cluster of minor shrines around it formed their identity and their focal point. They allege the Project “concealed and suppressed the cultural and archeological significance of our village.” The Requesters claim muck is currently being dumped immediately adjacent to the Temple. During the Panel’s discussions with the Requesters, they raised concerns that the wall separating the muck from the Temple will collapse, resulting in the Temple and other surrounding temples being submerged.

13. **Environmental Clearance.** The Requesters allege THDC “made a false claim” to Ministry of Environment, Forest and Climate Change (MoEFCC) in May 2021 that the Project achieved 51 percent physical progress to avoid “a proper public hearing process” for a fresh environmental clearance. The Requesters claim that under the MoEFCC notification dated March 18, 2021, a fresh environmental clearance requires a proper public hearing for projects below 50 percent physical progress. The Requesters state MoEFCC granted VPHEP a fresh environmental clearance in August 2021.

14. **Allegations of Intimidation and Reprisals.** The Requesters state that they feel threatened and are afraid to raise issues regarding the Project. The Requesters claim every employee of THDC was made to sign an affidavit stating that they would lose their jobs if they or their family members protested against the Project. According to the Requesters, those who spoke out in the past or protested have lost their jobs, and there are 50 police cases registered against those who have protested against the Project.

**Panel’s Due Diligence**

15. In accordance with its Operating Procedures, after receiving the Request, the Panel issued a Notice of Receipt on its website on March 15, 2022. The Panel conducted its due diligence by reviewing the information contained in the Request as well as in the Panel’s Investigation Report and other documents related to the previous Request. The Panel spoke to the Requesters on March 30, 2022, to better understand their concerns, and with Bank Management (“Management”) on April 7, 2022. On April 12, 2022, in response to the Panel’s queries, Management provided additional written information.

16. **Resettlement and Livelihood Rehabilitation.** Management informed the Panel that the village was acquired in 2011 through eminent domain in line with OP 4.12, and the village representatives signed a collective Memorandum of Understanding (MoU). It added that 125 out of the 140 households also signed individual MoUs, and nine households agreed to the state’s compensation. The resettlement package that was offered included livelihood rehabilitation measures. Management explained that the community opted for self-relocation to areas of their own choosing.

17. Management stated that six households refused to sign the individual MoUs, and all compensation funds due to them were deposited by THDC with the District Administration since 2011. Management informed the Panel that THDC issued five individual notices, as well as one public notice, to these six households between 2015 to 2021 to collect their compensation and to vacate their houses. Management stated that in September 2021 structures

---

5 Inspection Panel Operating Procedures, April 2014.
were demolished by the District Administration. According to Management, only two of the six houses were occupied during the time of demolition. The two remaining residents have been provided accommodation by THDC. According to Management, the belongings from all residents whose structures were demolished were inventoried by the government authorities and handed over to THDC for safekeeping. THDC has sent a notice to all householders that they may collect their belongings.

18. Management stated that its end-term evaluation report generally found improved socioeconomic conditions in the displaced households, and there is no indication of overall deterioration. Management further stated the Project is implementing mitigation measures for fuel and fodder loss, and each of the affected households are provided with cash annuity.

19. **Physical Cultural Resources.** Management initially stated the Temple has been secured with a protective wall to ensure that it is not damaged by works above and behind it. It subsequently clarified the purpose of the wall behind the Temple is to serve as a supporting structure for the road and that it is not a retaining wall for the muck, and that no muck is dumped behind the wall. After this Request was submitted, Management clarified that since the area of the village has been designated as a muck disposal site per the environmental clearance, THDC would be able to identify alternative sites within the village for muck dumping at a greater distance from the Temple. Management also added that it has asked THDC to identify areas to dump the muck at the village at a greater distance from the Temple.

20. Management stated that the site by the Temple will eventually be re-vegetated with proper landscaping. During the discussions with the Panel, Management presented a layout plan of the enhanced Temple area. Concerning the smaller temples and shrines in private homes, Management stated that the community relocated them during the resettlement process. Management also stated that other small community temples in the village will be protected, that the Environmental Management Plan has budgeted the funds for the enhancement of village temples and that THDC is willing to provide supplemental funds if needed.

21. **Infrastructure and Safety Conditions.** Management stated THDC constructed common property resources, such as the village panchayat, a school building, pathways, electricity and water supplies. Management informed the Panel that THDC regularly monitors the supply of water in all Project-affected villages at six-month intervals. The last monitoring was done in January 2022. Management added that THDC has built and is operating a piped water-supply system in the new resettlement colonies and that it has committed to providing alternative water sources if any of the recorded natural water sources dry up due to implementation of the Project, including through water tankers in emergency situations.

22. **Environmental Clearance.** Management informed the Panel that at the time of the environmental clearance extension, the completion of civil works was at 37 percent and the overall completion of all works at the Project site – including civil, establishment of sites, infrastructure, hydromechanical, electromechanical and others – stood at 53 percent. The environmental clearance and its extension are for specific durations and do not contain civil work completion milestones, though the Project completion gets discussed before the Expert

---

6 A panchayat is a village council.
Appraisal Committee when issuing the environmental clearance. Management added that the MoEFCC issued an environment clearance for the Project on August 26, 2021.

23. **Intimidation and Reprisals.** Concerning the claims of intimidation and reprisals, which are of serious concern to the Panel, Management stated that these concerns were first brought to its attention in December 2021. Management added that it raised these concerns with the THDC senior management for subsequent follow-up actions.

**Panel’s Observations and Determination**

24. The Panel assessed the Request, reviewing the current claims against its 2014 investigation of the Project. The Panel notes the 2014 investigation addressed the issues of resettlement of the village, the restoration of livelihoods and the livelihood rehabilitation package. The investigation also addressed the issue of gender-specific impact, livelihood and security issues in relation to women. The Panel understands the village was acquired through eminent domain, and the community opted for self-relocation to areas of their choosing. This was noted in the Investigation Report, which observed that 92 percent of the families from the village requested relocation to the other side of the Alaknanda River. The Panel notes the resettlement of the scheduled tribe was known and undertaken by the Project. The Panel notes that the purpose of acquiring the village for muck dumping was previously known and stated in the 2014 Investigation Report. The Panel notes that the 2014 investigation reported on the information provided in the environmental assessment for the Project that covered the drinking water sources for the 23 villages from both the left and right banks of the Alaknanda River in the area and noted that six of the 23 villages overlap with the 18 villages that are part of the Project-affected area.

25. The Panel notes the 2014 investigation addressed the historical, cultural and religious importance of the Lakshmi Narayan Temple, including that the Temple is a *swayamprakat* temple, which cannot be relocated because the site itself is holy. The 2014 investigation observed the commitments made to the Panel by the Project authorities that the Project intends to provide special protection for the Temple against damage during construction, to make additional improvements such as providing a suspension bridge across the Alaknanda River for people on the left bank to worship at the Temple, and to develop the vicinity around the Temple as an aesthetically pleasing park once Project activities cease. As noted above, Management confirmed to the Panel that the area around the Temple will still be re-vegetated with proper landscaping. The Panel notes the Requesters’ concerns regarding the safe access to the Temple, and the protection of the Temple. The Panel notes the muck dumping will not take place behind the wall of the Temple and THDC will be looking for alternative muck-dumping sites in the village at a distance from the Temple. The Panel further notes that the protective measures are currently under implementation.

26. The Panel understands from Management that the overall completion of all works at the Project site (including civil, establishment of sites, infrastructure, hydromechanical, electromechanical and others) at the time of environmental clearance stood at 53 percent, and this was discussed before the Expert Appraisal Committee that grants the environmental clearance.
27. After receipt of the Request, the Panel conducted its initial due diligence based on Paragraphs 13 to 15 of the Panel Resolution and verified the following:

- Two or more individuals, in this case 115 community members who live in the Project area and claim to be affected by the Project activities, signed the Request.
- The Requesters allege actual or potential harm caused by the Project’s works in their village that are part of the first component of VPHEP, which is financed by the Bank.
- The Bank has had prior knowledge of these issues. The Panel is therefore satisfied that the issues have been brought recently to the attention of the Bank prior to the submission of the Request for Inspection.
- The concerns raised in the Request do not relate to procurement.
- At the time of receipt of the Request, the Project was open, and 35.21 percent disbursed.
- The concerns raised in this Request – including resettlement, rehabilitation and the protection of physical cultural heritage – relate to aspects of the Project that were addressed in the 2014 investigation. The Panel also notes Management’s statement that the Lakshmi Narayan Temple and other small community temples in the village will be protected, muck dumping will be done at a greater distance from the Temple, and the site for the Temple will eventually be re-vegetated with proper landscaping after construction is completed. Similar commitments were also made by the Project authorities and covered in the 2014 Investigation Report. The Panel notes that the relevant environmental clearance from the Borrower was raised by the Requesters and the Panel is satisfied that this issue is already addressed and clearance provided for the Project in August 2021.

28. In light of the foregoing and in accordance with the Panel Resolution and its Operating Procedures, and after conducting its due diligence on the current Request, the Panel notes that the concerns raised in this Request relate to issues already investigated in 2014 when the Panel received the previous Request. Therefore, they cannot be considered as new evidence not known at the time of the prior Request, as required under the Inspection Panel Resolution. On this basis, the Panel is not registering this Request.

Yours sincerely,

Ramanie Kunanayagam
Chairperson

COMPLAINT (REQUEST FOR INSPECTION) FORM

To:
The Executive Secretary, The Inspection Panel, The World Bank, MSN: MC 10-1007
1818 H St., NW, Washington, DC 20433, USA. Fax: +1(202)-522-0916. Email: ipanel@worldbank.org

Section 1: Complaint
1. What harm do you believe the World Bank-financed project caused or is likely to cause to you or your community? Please describe in as much detail as possible.

That the village of [Redacted] is a heritage village, having an ancient historicity and connected to the history of India. The village was established by Adi Shankaracharya, around the temple of Lakhmi-Narayan, which was constructed during 8-9 century. It was a thriving community with rich and fertile land, Sanskrit scholars, renowned masons, fruit orchards and running spring water. Different castes lived together in harmony. The ancient temple and the cluster of minor shrines around it formed our identity and our focal point. However, our village now faces complete destruction by the construction of the Vishnugad-Pipalkoti hydro electric project (started since 2007) and through the involuntary rehabilitation of all the residents. Our land has been acquired as a muck dump zone by the project. In this entire process the project authorities concealed and suppressed the cultural and archeological significance of our village. Furthermore, all this acquisition and rehabilitation was based on a fraudulent agreement made with the villagers for rehabilitation and resettlement, signed by merely 8 villagers along with the headman.(on 26.06.2009). No resolution of the entire gram sabha was made. This agreement entirely ignores the key principle of ‘National Rehabilitation Policy (NRP)- 2007’ and World bank principle that favour en masse shifting for communities and also does not contain any plan of infrastructure. Thus approx 124 families that shifted out were scattered in nearby areas. Their lives and livelihood have degenerated since that time (since 2013-2014). The remaining houses were forcefully and brutally demolished by THDCIL on 22.09.2021 and thus forced the entire heritage village to vacate. This has resulted in an irreversible loss of community, heritage, traditional knowledge, social life, and well-being. The detailed complaint is being attached here along with relevant documents.

2. What is the name of the World Bank project? (If known)
   Vishnugad-Pipalkoti hydro electric project (VPHEP)

3. Where is the World Bank project located? (Please include country name)
   District- Chamoli, State-Uttarakhand, Country- India

4. Do you live in the project area?
   Yes

5. Have you previously reported your concerns to World Bank management? If yes, please provide the details about those communications and explain why you are not satisfied with the Bank’s action in response.

   Yes, the concerns were duly communicated to the World Bank management. However no satisfactory response has yet been received. All the relevant communications to World Bank and our dissatisfaction have also been communicated to the Inspection Panel. Few recent communications are being attached herewith.
6. If known, please list the World Bank's operational procedures you believe have not been followed.

   1. Basic principles of Rehabilitation and Resettlement adopted by the World Bank as well as
      enshrined in the 'National rehabilitation and resettlement policy-2007' of India, have been
      violated.

7. Do you expect any form of retaliation or threats for filing this complaint to the Inspection Panel?

   No

Section 2: Contact Information

8. Are you complainants or a representative of complainants?
   Village Panchayat is the complainant which is being represented by its representatives here (resolution of
   village Panchayat is attached).

9. Would you like your name and contact details to be kept confidential?  (The Inspection Panel will not disclose
    your identities to anyone without your prior consent.)  Yes

10. Complainants' Names (Minimum two names and signatures are required):

    | Name | Name |

NOTES:
- Please attach supporting documents, if available.
- If you have any difficulty in completing the form, please contact the Inspection Panel at panel@worldbank.org or by phone: +1-202-458-5200.

DETAIL COMPLAINT:

To,

The Chair, Inspection Panel

Subject: Complaint regarding involuntary displacement, loss of cultural heritage, and tearing apart of social fabric of [redacted] village through scattered and isolated rehabilitation by the THDCL, Vishnugad-Pipalkoti Hydro Electric Project (VPHEP), Chamoli, Uttarakhand.

Represented by: The entire [redacted] as passed in an official resolution of the Village Panchayat, dated 20.02.2022 authorizing [redacted] And [redacted] to be the official representatives to the Inspection panel, World bank, for all its communications and interactions.

1. UNIQUE HISTORICITY OF [redacted]

That the village of [redacted] is an ancient hamlet deeply connected to the history of India. Around the 9th century Adi Shankaracharya established Laxmi-Narayan temple and along with it the village community of [redacted] for the continual worship. To this end he brought Gaud brahmins from Bengal and they settled here. In ancient time it was the main base (mukhya padaav) of the pilgrims visiting Sri Badrinath shrine. The temple of Lakshmi Narayan established by Adi Shankaracharya still stands today in [redacted] and all rituals were being observed until 2007 onwards when the THDCL began acquiring land for the hydroproject. Being the last stop before Badrinath, this temple provided an alternative place for worship for those who could not make the difficult trek all the way to Badrinath, thus making it an important heritage site. Around the main Laxmi-Narayan temple, there are group of temples of other deities namely Shiv, Chandika, Ganesh and Surya Kund all dated 8-9th Century. Besides, there are local deities
2. UNIQUE CULTURAL DIVERSITY OF [REDACTED]

[REDACTED] has a unique composition with over 14 subcastes (brahmin, kshatriya, SC, ST) living together in harmony and in absolute unity as one village community, one identity and one culture. While it is only the [REDACTED] who are allowed to function as priests and enter the sanctum sanctorum of the Laxmi Narayan temple, everyone else offers their devotions in it. Our village was renowned for its Sanskrit teachers, and we even have today ancient manuscripts ‘pandulipi’ written in Sanskrit/Pali language from our village. In addition an ancient copper inscription ‘tamrapatra’ also exists dating to the 10th century recording our historicity.

3. BRIEF BACKGROUND OF [REDACTED] IN RELATION TO VISHNUGAD-PIPALKOTI HYDROPROJECT

At the outset when the project was introduced to our village in 2007, it was portrayed as being in the national interest and further we were sure that we had no choice of opposition. At the time we had no legal aid, nor any independent assistance; nor were any documents provided to us in Hindi and none of us were familiar enough with English to understand difficult documents of law and policy. Hence not only did we not understand our rights as per National rehab policy of India or World bank, but we felt obligated to accept whatever was offered. Most gravely we never realized that the ancient 9th century Laxmi Narayan temple, from which we draw our identity and our unique historicity had any claim to be protected. While we always say that the real owner of [REDACTED] village land is the deity of the temple, we never realized that we could stand up and protect it and our centuries old traditions from annihilation. It is to be regretted that neither the ‘educated’ company officials nor our government or even World bank take this into cognizance. Obviously it was an inconvenient truth.

At the time in 2009, a fraudulent agreement was made. But the lump sum of Rs 10 lakh per family, excluding compensation for land or house structures seemed to lure many of us without any of us really realizing the long term losses and impoverishment. Today over a decade later without any community, village, land or steady means of income we realize just how impoverished we have become both economically and socially. The cultural loss is too deep to assess. Today on paper all scattered families still belong to [REDACTED] village, but our togetherness and closely knit social wellbeing, identity and security of belonging is lost. But we realize that we cannot inflict this injustice on our future generations, it is our duty to fight for our rights, and raise our voice of protest, which we did raise in these intervening years, but it has now risen again, heartfelt and anguished, with the entire village, each and every member, united and lending his/her support.

4. HISTORICAL IMPORTANCE CONCEALED BY THDCL

Our village should never have been uprooted and rehabilitated in the first instance if the project authority (THDC company) had accurately reported the presence of this ancient temple to which our village community is inextricably attached, and which makes it a protected site. But, unfortunately the company in its Environmental Impact Assessment (EIA) report stated as under:

"7.6 Impact on Physical and Cultural Resources:

The project does not have any impact on cultural resources within the project influence area and project immediate affected area. -(THDC, EIA report)

The report made by the THDC in its EIA dated (uploaded) 2009 , acknowledges that while the outer structure of the temple may have been reconstructed in the past, the inner sanctum of the temple is still
original. In fact the Indian National Trust for Art and Cultural Heritage (INTACH) has now recommended restoring the entire village. But this critical fact was concealed at the time of seeking clearance and land acquisition, and our village thoughtlessly designated as a muck dump zone. This has resulted in a grave injustice not only to our community but to our national heritage. (Attached- INTACH letter)

5. AGREEMENT MADE BY THDC WITH VILLAGERS IN 2009 A FRAUD

That for rehabilitation and resettlement there was merely an agreement made between the then village headman and just 9 villagers of [Redacted] and the THDCL on 26.06.2009. However this was done on an individual capacity by the headman and there was no resolution passed by the Village Panchayat body, of [Redacted] in support of this agreement. In fact these 9 other villagers are all mostly relatives of the pradhaan. The [Redacted] was thereafter rewarded with a permanent job in the THDCL. The villagers being largely illiterate were not able to gauge the extent of the fraud, or properly evaluate their losses. They had no legal aid and were thus unable to negotiate in an intelligent manner for their rights. This agreement not only ignores the basic principle of ‘National Rehabilitation Policy (NRP)- 2007’ in favour of en masse shifting for such a rich thriving village community but also does not contain any plan of rebuilding of infrastructure and community daily needs. It does not detail how it makes these involuntarily rehabilitated people better off in living standards than before, as stipulated in the ‘National Rehabilitation Policy- 2007’. The villagers were handed a monetary package and literally left to fend for themselves and relocate themselves on their own. Thus approx 124 families that shifted out were scattered in nearby areas. This has resulted in an irreversible loss of community, heritage, traditional knowledge, social life, and well-being. (Copy of the fraudulent agreement made between THDCL and villagers on 26.06.2009 is being annexed herewith).

6. NATIONAL REHABILITATION AND WORLD BANK POLICIES VIOLATED

That there has been continuous negligence and violations in the implementation of the provisions made under ‘National Rehabilitation and Resettlement Policy 2007’ while carrying out the activities related to rehabilitation and resettlement of the villagers of [Redacted] village. The National Rehabilitation policy of India (NRP) and the stated policy of the World bank (WB) also share a common vision. Key points of both policies and the violation are as under:

1. Involuntary resettlement should be avoided where feasible, or minimized, exploring all viable alternative project designs. (WB)
   a) To minimise displacement and to promote, ‘as far as possible, non-displacing or least-displacing alternatives; (NRP)

There has been no attempt in the ‘Rehabilitation and resettlement plan’ of the THDCL, to keep this ancient culture and community intact by way of non-displacement. There has never has been any attempt to search for alternate alignments or design modifications that would enable the village to remain intact in an environmentally safe ambience. The negligence of the company is evident in the fact that the THDCL did not even acknowledge this cultural and social perspective of our ancient village in their social impact assessment and rehabilitation plan. On the contrary muck is currently being dumped right adjacent to the Laxmi Narayan temple despite protests by the villagers.

2. Where it is not feasible to avoid resettlement, resettlement activities should be conceived and executed as sustainable development programs. Providing sufficient investment resources to enable the persons displaced by the project to share in project benefits. (WB)
There has been no such sharing of project benefits. In fact today while the villagers lie scattered in different locations without any infrastructure and without any community life at all we point out that the THDCL compound boasts of gymns, offices, guest houses, running water, roads etc. It is in gross violation of the NRP which states: 'all affected families shall be provided basic infrastructural facilities...It would be desirable that provisions of drinking water, electricity, schools, dispensaries and access to resettlement sites be included in the the resettlement plan.' We will just cite two major instances in violation:

a. The access route to our forests and grazing land has increased by 3 km since those families relocated to [redacted] still use their old forests near [redacted]. This translates into several hours of increased walking and load carrying for our women.

b. Another grave setback is the lack of water supply which is currently only 2 hours daily for the group relocated to [redacted] one in the morning and one in the evening. For this we are totally dependent on a pump run and owned by the THDC. The storage tank is never cleaned. Whereas at [redacted] we had a continuous, abundant supply of free fresh spring water for all our needs.

3. Displaced persons should be meaningfully consulted and should have opportunities to participate in planning and implementing resettlement programs. (WB)

(b) to ensure adequate rehabilitation package and expeditious' implementation of the rehabilitation process with the active participation of the affected families. (NRP)

There has never been any valid or meaningful participation of the villagers at all, excepting when the company needed to patch together its fraudulent agreement to commence land acquisition, or when it needed signatures to show that it had public hearings. In fact since no documents were ever provided in Hindi any participation was precluded.

Even some crucial demands of the villagers like protection of traditional bel-patr (vilva leaf) forest; the construction of an approach road to [redacted] where some of displaced families are staying; the constitution of a new panchayat for displaced families; setting up of street lights; demanding rights of grass and fodder for the villagers; protection of ancient temples/maths; provision of permanent employment for affected families, have not been addressed even after 12 years of land acquisition.

The Rehabilitation Plan which is a key document was made without any consultation with us. In fact we still do not know its contents. Recently we found out that this Plan provides for a Village Development Advisory committee. It states -

'To ensure that the affected persons are meaningfully consulted and provided opportunities to participate in the planning and implementation process of the rehabilitation program and in order to suitably accommodate their inputs and make the project more participatory in nature and broad based in its scope a village level institutional setup is provided as per the R&R Policy. As part of this a Village Development Advisory Committee (Shist Mandal) is constituted after initiating the land acquisition process through notification under section 4 of Land Acquisition Act. This Committee has around 8 to 23 members depending upon the total population of the village. The committee represents all social groups in the village and is headed by the Chairman elected by the members.'

We state that no such committee was set up and that we even had no knowledge of the provision of such a body.

4. Displaced persons should be assisted in their efforts to improve their livelihoods and standards of living or at least to restore them, in real terms to pre-displacement levels or to levels prevailing prior to the beginning of project implementation whichever is higher. (WB)
(d) to provide a better standard of living, making concerted efforts for providing sustainable income to the affected families. (NRP)

* The villagers are in no way economically better off than prior to rehabilitation. About 80 percent have temporary jobs with project company itself, and only 10% have received permanent jobs. The nature of the employment is of labour class and the average salary between Rs.10,000 and 15,000 per month. And even these jobs are doled out as a favour, after personal recommendations, thus seriously hurting our self dignity and independence.

* Further the loss of orchards and fruit bearing trees like guava, mango, litchi, jackfruit, lemon, citrus etc. has taken away a permanent source of high income for generations. These trees were acquired and felled by the project authorities.

* Since the houses of [redacted] were constructed following traditional architecture, they were built of stone, mud, wood and patal roof slates. They were in no way ‘kachha’ even though no cement or brick was used. In fact these structures are known to be earthquake proof and are sturdier and longer lasting than any cement buildings. Moreover the patal slates are not available any longer and even the traditional slate laying mistsirs are no longer easily found, making such structures irreplaceable. Due to their rare and ecological building material, earthquake proof design and rare workmanship in fact these houses have a much higher value than any ‘pucca’ modern structure. Yet the THDCIL compensated such priceless heritage buildings on the lower ‘kachha’ building rates, which is lower than the sum allotted for ‘pucca’ buildings. An e.g. is the house of [redacted] which is double storied, patal roofed, eight roomed, with pillared verandah, which was considered ‘kacha’. (Annexure and photos attached). To make matters worse the displaced villagers who had no knowledge of modern construction were left to build homes on their own. Their costs proved to exceed the money they had received. Not only are these cement structures more dangerous in earthquakes, they also do not have the weather friendly and ecological qualities of a traditional house.

* For the Schedule tribe Bhotia community who having no land ownership, used to work on the rest of our fields, with the scattering of our community they have lost this single opportunity for employment. Although the NRP states: ‘to ensure that special care is taken for protecting the rights of the weaker sections of society, especially members of the Scheduled Castes and Scheduled Tribes, and to create obligations on the State for their treatment with concern and sensitivity.’

*Since we have been cut off from our grazing lands and forests, cattle rearing, fuel collecting, grass cutting etc. has become much more labour intensive and difficult. Already our women suffer from physical overwork, this has worsened their condition tremendously.

* Besides this their overall quality of life through loss of a communal and social participation has declined immensely.

* The clusters that have settled at [redacted] are in an unsafe location between two glacial streams. All the recent disasters including the recent ice and rock avalanche at Chamoli, in Rishi Ganga, occoured on glacial streams. Whereas [redacted] is totally secure from such disasters. Hence even in terms of physical location we are worse off than before.

5. Where displacement is on account of land acquisition, to facilitate harmonious relationship between the requiring body and affected families through mutual cooperation. (NRP)

Ironically today there are more than 50 police cases registered against the protesting villagers of [redacted] and nearby [redacted]. Further every employee of the company has been made to mandatorily sign an affidavit stating that if he or any family member engages in protests the said employee would lose their job. Those who spoke out in the past, or protested, paid with losing their jobs. [redacted] who has requested anonymity, informed that he gave his jeep for use to the villagers protesting against their house demolitions. Consequently he received a show cause notice from the company, with whom his vehicle was hired as a taxi. They have determined to terminate their job agreement with him. The company has thus muffled all opposition and free speech. It has misled the villagers into believing that
they are doing a favour to the displaced village by providing employment; whereas not only are they duty bound by law to do so, but they are also heavily indebted to us villagers who have literally been made to give up everything for the project. (A sample copy of the affidavit showing the condition of restraining them from any protest is being annexed herewith.)

The villagers are upset that the salaries and benefits given to us people who were made to give up everything, are on par with any outside employee, who has not made any such sacrifice. Thus there has been a direct conflict of interest once the villagers became the employees of the company, rendering them voiceless and helpless to demand a fair treatment.

Most shockingly of all the company routinely interferes in village affairs ensuring that a united voice of protest does not arise. It does not allow its employees to attend communal gatherings and festivities whenever we try to do something with our scattered state. It makes its employees spy on other villagers in meetings to inform on who is protesting, and thus has created a rift, an atmosphere of mistrust and suspicion in our once united and thriving community. It has only been after a lot of introspection and discussion that finally we are managing to speak openly.

6. 'In case the entire population of the village or area to be shifted belongs to a particular community, such population or families may as far as possible be resettled en masse in a compact area so that socio-cultural relations and social harmony amongst the families is not disturbed.' (NRP-2007)

a. Since 2009 no plan for an en masse shifting was ever deliberated or proposed. On the contrary the involuntary rehabilitation of an entire village of 184 families was reduced and belittled to a one-time monetary compensation only. Thus, the village families were scattered by being left to relocate on their own as and where they pleased. No attempt at providing a cohesive life or community infrastructure was made, resulting in a loss of identity and social wellbeing and security. Absolutely no responsibility towards their existence and long-term welfare was shown. The project authorities have shown no regret at any point whatsoever regarding this complete loss of a thriving community; nor have they demonstrated any intentions to fulfill the national objective of preserving a community even though rehabilitated. The villagers are not even aware that any such provisions exists.

b. That, the villagers are deeply traumatized that having been uprooted and lost their independent resources of land, forest, wood, water, grass and grazing ground, they are now dependent on the company for livelihood. The villagers are profoundly shaken by the entire ripping apart of their social fabric and community life, that was no less than 10 centuries old. The annual Bagadwad devatamela has not taken place since 2009 because the main chowk of the village was broken. The temples of Bagadwad devata, Laxmi Narayan, Shiva mandir and Chandika devi mandir, all remain closed because there are no priests left for worship, except for haphazard visits by individual villagers.

c. After losing their permanent traditional way of life and livelihood wherein grass and fodder collection, animal husbandry, agricultural and religious activities in an ancient socio-cultural fabric gave them life security and social well being, the villagers, now, are in a far worse social, mental and economical condition than before, due to the full dependence on the company for livelihood on the one hand and lack of access to independent use of resources and community support on the other.

7. 'All information on displacement, rehabilitation and resettlement, with names of the affected persons and details of the rehabilitation and resettlement package, shall be placed in the public domain on the Internet as well as shared with the concerned gram sabhas, panchayats, etc. by the
project authorities. NRW.
But no such information was ever shared in a transparent manner, no documents regarding rehabilitation plan or other project related information were ever shared in local (Hindi) language. The public information center (PIC) was just closed after the land acquisition formalities in 2009 itself. Even till today villagers are not aware of the rehabilitation policy because the same was never shared in Hindi language among the affected families. In fact the history of the villagers versus the company records more of suppression and collision, with scant attention to human rights.

8. FAILURE OF THDCL REHABILITATION PLAN: A HISTORY OF PROTESTS BY HAAT VILLAGERS

That a continuous unrest among the villagers due to issues related to rehabilitation and resettlement resulted in several agitations. Subsequently several meetings were held between villagers and local administration. THDCL felt apprehensive and just to bypass these valid agitations, filed a writ petition No. WP (C) No 2122, dated 2019 before the Hon’ble High Court of Uttarakhand. The Hon’ble Court refused to interfere in the matter but directed local administration to resolve the issue. The High Court in its order dated 05.12.2019 directed that, “direct the District Magistrate, Chamoli to make an attempt at reconciliation between both the parties, and try and resolve the issues amicably between them.”

In compliance with aforesaid directions the District administration of Chamoli convened a meeting on 13.12.2019 under the Chairmanship of Additional District Magistrate (ADM) and considered several points relating to the aforesaid project. The villagers raised several important concerns which were not included in the minutes of meeting dated 13.12.2019 issued by District Administration. Villagers thereafter send their written concerns on 24.12.2019 for inclusion in the minutes but their concerns remained unattended and ignored. Meeting minutes issued by local administration dated 13.12.2019 and subsequent submission of villagers on 24.12.2019 are the testimony of gross failure of rehabilitation and resettlement policy adopted by the project authorities. Here the issues regarding protection of vilva-forest, road construction for problem of water shortage, for providing employment, a committee for fair investigation of rehabilitation issue, withdrawal of false cases against villagers etc. are discussed in detail. (Minutes issued by District administration dated 13.12.2019 and subsequent submission by villagers on 24.12.2019 are attached herewith) Further the district administration in the recent meeting of 23.08.2021 between the gram panchayat and project proponents acknowledged and directed the project proponent to take action on issues raised by the villagers. (The recent minutes of 23.08.2021 issued by local administration is hereby annexed)

9. FORCEFUL EVICTION AND DEMOLITION OF HOUSES OF 16 REMAINING FAMILIES ON 22.9.21

On 22.09.2021, in violation of all the fundamental rights, the THDCL along with more than 200 police men, 2 Poklan excavators and 1 bulldozer, forcefully entered the houses of villagers, threw out luggage/belongings and completely demolished their homes. Some protestors, including a widow whose house was being razed was locked up in the police station and only in the evening was she dropped off on the main road. Her only son who serves in the army, was away from home serving his country. In some cases where the owners were absent, they bulldozed the house along with all its furniture and belongings. [Redacted], reports that all her savings from selling milk, and stored under her bed was lost.
Worship places in houses with ancient inherited deities, temples, cow shelters, pathways, and electricity cables of village were also destroyed, thereby making the villagers homeless, shelterless, helpless and devoid of their livelihood activities. Those whose houses were forcefully demolished, neither received any monetary compensation nor any acceptable rehabilitation plan. (The pictures, videos and local news reports of this brutal action by the THDCL are annexed herewith). Although they had received several notices, no one was especially concerned since such notices were a routine affair since the last years.

A. In this demolition, not only were buildings razed to rubble but the atrocious and violent manner in which it was done also subjected the villagers to deep trauma and pain. Some owners were absent and had to rush back only to see a pile of rubble, others were dragged out, without even their kurta, in middle of performing the shraadha ritual, others were taking a bath and involved in household chores. This tyrannical use of force has been viewed by the villagers as an act of ‘talibani’ authoritarianism.

B. Such a senseless, violent and excessive act was undertaken by the THDCL in spite of the fact that the critical issue of rehabilitation and resettlement of Village is still subjudice and under consideration. As mentioned above about the meeting held on 13.12.2019 by the directions of Hon’ble Court’s order dated 05.12.2019 in WP (C) No 2122 of 2019, in which meeting villagers demanded to quash the earlier agreement on rehabilitation (in 2009) and to examine the past rehabilitation works which have not been carried out as per National Relief and Rehabilitation Policy 2007. Further, some residents of filed a PIL in 2020, demanding to nullify the 2009 agreement.

C. Since 2019 there have been constant deliberations going on between THDCL and residents of Village in the presence of Govt representatives. In last such meeting dated 23.08.2021 it was decided that a survey report will be prepared and submitted before joint magistrate Chamoli and next meeting will be held on 03.10.2021 on the issue of employment of project affected people. Yet not even waiting for this report, or for any outcome of these talks, in an act of sheer arrogance and abuse of power, the THDCL went ahead and demolished homes of innocent and helpless villagers, rendering them homeless instantly.

D. It is pertinent to mention that since 2009 when the agreement was made, the work only commenced in 2014, in a sporadic and haphazard manner. There was no current work ongoing and since the area of is to be used as a muck dumping zone, there was no urgency for immediate land use, and thus no cause for the rash, desperate and heavy-handed manner in which the THDCL chose to behave. This demolition becomes even more unjustified and unwarranted in light of the facts that deliberations between THDC and affected persons were ongoing, and that 2009 agreement between both parties was sought to be quashed and was subjudice in the High court.

10. FALSE INFORMATION BY THDCL TO BYPASS PUBLIC HEARING
That the permission of environmental clearance (EC) to Vishnugad-Pipalkoti project was granted for a period for 10 years which expired in August 2017. THDCL then sought extension on the ground that the project would be completed by 2020. On this assurance 3 years extension was granted by MoEF&CC which also finally expired in August 2020. As per the law a fresh environmental clearance needed to be obtained to construct the project. The law (MoEF&CC Notification dated 18.03.2021) mandates that if the physical progress of a project is below 50% then it has to go through a proper public hearing process to apply for fresh environmental clearance. However, THDCL made a false claim in May 2021 to the
MoEF&CC (document annexed), that the project had achieved a 51% physical progress. On this false claim it was granted a fresh environmental clearance. However, this clearance was challenged before the National Green Tribunal (NGT) by an economist in October-2021 on the basis of the facts that actual physical progress is about 10% against the claim of 51% (document annexed). NGT took cognizance of the matter and notice has been issued in October 2021 to the Ministry and THDCL as well (The NGT order dated 08.10.2021 is annexed). As direct observers living next door, we were also surprised by the exaggerated claim of over 50% progress was made so brazenly by THDCL to hoodwink the authorities. On ground the fact is that the TBM (tunnel boring machine) has been stuck since 2019 and no excavation on the Head Race Tunnel (HRT) has yet been carried out, besides barrage and power house is under construction and only foundation works are completed. Further, as per 2013 Judgment of Supreme Court in Alaknanda matter, MoEF&CC was directed not to grant any fresh environmental clearance to any hydro project, but in contradiction again a fresh clearance has been granted to this project by MoEF&CC in August 2021.

11. THE FINAL GREEN SIGNAL VPHEP IS STILL PENDING IN THE SUPREME COURT IN THE WAKE OF RECENT DISASTERS.

In the wake of the 2013 Kedarnath floods, the 2012 flooding of Assi Ganga and the Chamoli avalanche of 2021 there has been a serious rethink and reevaluation of hydropower projects in the Himalayas and in disaster prone Uttarakhand. In 2013 the Supreme court taking suo motu cognizance stayed construction of 24 HEPs. More recently the Prime minister office stated in its minutes dated 25.02.2019 that ‘No new hydro electric project shall be taken up on River Ganga or its tributaries in the State of Uttarakhand.....with respect to the projects under construction, the seven projects as recommended by MoWR, which are reported to be more than 50% complete (listed at Annexure I) may be taken up for further construction.”

7 projects of which VPHEP is one has been however given the green signal by the environment ministry via affidavit dated 22 August 2021 on the sole and erroneous basis that over 50 percent work has been done. This is not true. In fact the HEP just upstream, Tapovan-vishnugad was buried under tonnes of debris in just seconds in the Chamoli disaster along Rishi-Ganga. The HEP just above it namely Rishiganga, was simply wiped out. In fact the flood waters did reach VPHEP but its force was expended by then. Hence these projects are in very clear and direct danger from climate change induced extreme events. Not only is crores of funds wasted, but they also increase the impact of disasters as found by Supreme court formulated Ravi Chopra committee. Further 60 eminent citizens of our country wrote an open letter to the Prime minister stating that “it would be a profound error, indeed a self defeating exercise, to implement any more HEPs in the Himalaya and on the Ganga, whether under construction, new or proposed.” So the final decision on the VPHEP is still pending at the Supreme Court. Hence in such a scenario to demolish more heritage houses, and further deprive and traumatize a community is a crime that the company should be held accountable for.

12. PREVIOUS VISIT AND REPORT BY INSPECTION PANEL IN 2014.

We understood from our online meeting on 20.01.2022 that the inspection panel would not relook at old issues. Having carefully studied the 2014 report of Inspection Panel and complaint it is amply clear that this key issue of heritage which was so cleverly concealed by the company was not considered at all. In fact had the existence of this ancient temple, dating back over 1000 years been made fairly known in the
company reports, and the historical significance of admitted, no company could have legally acquired our land, much less displaced us.

The report mostly deals with the environmental impacts in the immediate and further vicinity. Where it deals with culture is only in relation to the significance of the Alaknanda river which is part of the Ganga. The issue of rehabilitation and resettlement was then limited to only for the (10-12 families) which were thereafter resolved via exempting from any displacement.

Further the vital issue of en masse rehabilitation, general impoverishment both economical and social, destruction and threat to temples, which have only become clear now, after a decade of experience, have not been dealt with at all. Hence although your team did visit in 2014, and met some villagers of hamlet, no meeting with villagers proper took place. We earnestly look forward to rectifying that showing you first hand proofs of all that we have mentioned in this complaint.

CONCLUSION AND APPEAL

Today we ask the Inspection Panel to intervene and to take a wider perspective on To not be limited to a mere financial perspective but to rehabilitate the entire community so that once again a thriving, living village emerges from the dust. We would like you to recommend that our village become a model rehabilitation site, so that we can have all those essentials taken from us like fresh water, grazing land etc. and once again build our torn social fabric and community life. We would like each family to have cows and dairy; revival of lost crafts and permanent livelihoods independent of THDCIL which can be worked out with us. We can rebuild our houses using organic materials as close to the original as is possible in todays times – without cement. We would like to regain our lost dignity. We would like to put an end to this struggle for justice and honesty and get on with our lives. In short we would like to achieve what has been professed by the World bank and promised in the National rehabilitation policy – to be the same, if not better off than before, and to be rehabilitated en masse to avoid tearing apart the social fabric that holds our lives together.

This is a humanitarian issue. We are willing to cooperate. We want a better life for our future generations. We hope by this complaint that we have accurately portrayed our plight and inspired you to take an active stand. So far as the minutes show, our meeting with the world bank team and the THDCIL have been fruitless. We are fighting from under rented roofs and losing our lives meanwhile. Hence we are reposing a lot of faith in the panel.

We look forward to your assistance in any manner you deem fit.

With due regards-

District- Chamoli, (Uttarakhand)
India.
